

Ruby 101

Intermediate Ruby: Math Module

Math module:

Trig functions for more advanced math

can be called as class methods

```
Math.cos x
```

```
Math::cos x
```

or included

```
include Math
```

```
cos x
```

Math module: Notetable methods

Intermediate Ruby:

`sin``cos``tan``asin (arc sin)``acos``atan``log``log10``log2``sqrt``hypot x, y -> Given sides of a right triangle, finds hypot`

Math module: Notetable CONSTANTS

E
PI

Intermediate Ruby:

Sometimes we need more:

`mathn` -> Keeps numbers more precise and gives access to several other math modules:

`Prime` -> For generating Prime Numbers

`CMath` -> Math for Complex Numbers

`Vector` -> Class for representing a vector, with vector arithmetic

`Matrix` -> Class for representing a Matrix, with matrix arithmetic

To use:

```
require 'mathn'
```
